Introduction Of Employee Management System

Employee Management System is a program that aims at storing , manipulating, deleting,updating employee data such as name , id, number , salary , address. Maintaining a hard copy is difficult for a employer so this program is developed to make it convinient for employer. In this program we first log in to the employee portal with an id and password then we work on the data of employee as required for the situation.

Methodology

Approach of function are owed in the leading platform.Below are the functions created as follow:

- 1) **empdata()** : This function is used to add the data of new employee. The data of employee are Name, Id, Address, Number, Salary.
- 2) **show()** : This function is used to print the data of all employee.
- 3) **search()** : This function is used to search and print the data of employee on the basis of given Id number. If Id not found it will print not found.
- 4) **update()**: This function is used to search the employee on the basis of Id given and update the data of that employee. If Id not found it will print not found.
- 5) **del()**: This function will give two option one to delete single entry of employee other entire entry of employee. Simply this function is called to delete employee data.
- 6) **main()**: Firstly in main function you need to sign up and then log into the employee portal after logging in user will be prompted to call the above mentioned function according to need and user desired function will be called.
